

## **Chillizone Market Umbrella Safety Information**

*Ensuring Safe and Enjoyable Outdoor Events*

### **Important Notice:**

At Chillizone, we prioritise the safety and satisfaction of our customers and their guests. While our Market Umbrellas are designed to provide shade and comfort during outdoor events, it's essential to understand our approach to wind ratings:

**No Specific Wind Rating:** Please note that Chillizone outdoor umbrellas do not have a specific wind rating. Instead, we adhere to industry-standard testing methods to ensure quality and durability.

**Testing Methods:** Our umbrellas undergo rigorous testing methods during manufacturing to provide valuable insights into the performance of our umbrellas in various conditions. However, these are made in controlled environments and cannot replicate real-world environments and landscapes, and therefore cannot provide a completely accurate indication of wind ratings.

### **Safety Recommendations:**

- Umbrella set-up is conducted only by Chillizone staff. This guarantees installation has been made correctly and ensures the safety of your staff and guests.
- Monitor weather conditions and retract umbrellas during strong winds or inclement weather. For context, 35 kph will likely knock over lightweight outdoor furniture such as plastic chairs or small tables.
- If the wind is uncomfortable for you to be outside in, then you can assume it's too windy for our Market Umbrellas. Please place them down to prevent damage and/or injury.

**Conclusion:** While we do not have a specific wind rating, our umbrellas are crafted with quality and durability in mind. By following safety recommendations and using our umbrellas responsibly, you can ensure a safe and enjoyable outdoor experience for all.

For any questions or concerns regarding umbrella safety, please don't hesitate to contact us.
